

References

Out of 597 references gathered below, 499 appeared in 93 different periodicals, among which most articles were published in: *Discrete Mathematics* 65, *Journal of Combinatorial Theory* (old, Series A and B) 51, *Journal of Graph Theory* 50, *Ars Combinatoria* 26, *Journal of Combinatorial Mathematics and Combinatorial Computing* 24, *Electronic Journal of Combinatorics* 20, *European Journal of Combinatorics* 20, *Utilitas Mathematica* 17, *Australasian Journal of Combinatorics* 14, *Graphs and Combinatorics* 14, *Combinatorica* 13, and *Congressus Numerantium* 12. The results of 121 references depend on computer algorithms.

The references are ordered alphabetically by the last name of the first author, and where multiple papers have the same first author they are ordered by the last name of the second author, etc. We preferred that all work by the same author be in consecutive positions. Unfortunately, this causes that some of the abbreviations are not in alphabetical order. For example, [BaRT] is earlier on the list than [BaLS]. We also wish to explain a possible confusion with respect to the order of parts and spelling of Chinese names. We put them without any abbreviations, often with the last name written first as is customary in original. This is sometimes different from the citations in other sources. One can obtain all variations of writing any specific name by consulting the authors database of *Mathematical Reviews* at <http://www.ams.org/mathscinet/search>.

Papers containing results obtained with the help of computer algorithms have been marked with stars. We identify two such categories of papers: those marked with * involving some use of computers where the results are easily verifiable with some computations, and those marked with ** where cpu intensive algorithms have to be implemented to replicate or verify the results. The first category contains mostly constructions done by algorithms, while the second mostly nonexistence results or claims of complete enumerations of special classes of graphs.
