VECTOR VALUED FUNCTIONS OF BOUNDED BIDIMENSIONAL Φ -VARIATION

MIREYA BRACAMONTE¹, JOSÉ GIMÉNEZ^{2*} AND NELSON MERENTES³

Communicated by J. Soria

ABSTRACT. In this article we present a generalization of the concept of function of bounded variation, in the sense of Riesz, for functions defined on a rectangle in \mathbb{R}^2 , which take values in a Banach space. As applications, we obtain generalizations of some results due to Chistyakov and a counterpart of the classical Riesz's Lemma.
