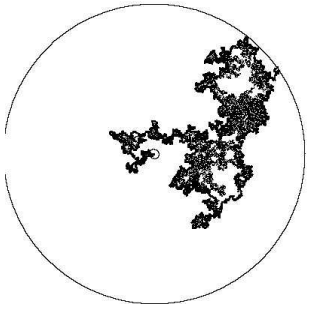
Discrete Mathematics & Theoretical Computer Science

Volume dedicated to the proceedings of the conference

Discrete Random walks:



Theory and Applications in
Combinatorics,
Computational Biology,
Computer Science,
Probability Theory,
and Statistical Physics.

Paris, Institut Henri Poincaré, 1-5 September 2003.

Guest editors:
Cyril Banderier and Christian Krattenthaler.

Sponsors: Laboratoire d'Informatique de Paris-Nord,
University of Paris Nord, INRIA, GDR-ALP.

Acknowledgements

This conference could not have been hold withtout the financial support of

- the Laboratoire d'Informatique de Paris-Nord,
- the University of Paris 13,
- the INRIA (French National Institute for Research in Computer Science and Control),
- the CNRS project GDR-ALP.

We are indebted to the referees who allowed to improve the quality of the articles presented at the *Discrete Random Walks* conference. We hope that both authors and attenders enjoyed this conference.

Finally, we would like to thank, for their technical help and/or their friendly support/suggestions:

- Jens Gustedt and Ingrid Falk, respectively, editor-in-chief and webmaster of the review DMTCS, and also Emmanuel Jeandel,
- the scientific committee members,
- Christian Lavault, Vlady Ravelomanana (organizing committee members),
- Jacqueline Vauzeilles and Christophe Fouqueré, respectively previous and actual deans of the Laboratoire d'Informatique de Paris-Nord.
- Brigitte Guéveneux (secretary of the LIPN), and the Agence comptable of the University of Paris 13,
- the Inria direction of European and International relations, the Inria colloque service and the Inria printing office,
- Isabelle Duc and the other people from the Institut Henri Poincaré,
- Virginie Collette (Algorithms Project secretary),
- Philippe Flajolet and Christiane Frougny.

The editors:
Cyril Banderier and Christian Krattenthaler.

Discrete Random Walks

Scientifi c committee

- Cyril Banderier, CNRS, LIPN, Université de Paris 13 (Villetaneuse, France)
- Mireille Bousquet-Mélou, CNRS, LaBRI, Université de Bordeaux 1 (Talence, France)
- Ira Gessel, Brandeis University (USA)
- Christian Krattenthaler, IGD, Université Claude Bernard Lyon-I (Villeurbanne, France) & Institut für Mathematik, Universität Wien (Austria)
- Didier Piau, LaPCS, Université Claude Bernard Lyon-I (Lyon, France)
- Philippe Robert, INRIA (Rocquencourt, France)
- Alistair Sinclair, University of California (Berkeley, USA)
- Wendelin Werner, Université de Paris Sud (Orsay, France)

Organizing committee

- Cyril Banderier, Christian Lavault & Vlady Ravelomanana (LIPN, Université de Paris 13).

Invited speakers

- Richard Durrett, Cornell University (USA)
- Ira Gessel, Brandeis University (USA)
- Mark Jerrum, University of Edinburgh (UK)
- Philippe Marchal, cole Normale Supérieure (Paris, France)
- Yuval Peres, University of California (Berkeley, USA)
- Gordon Slade, University of British Colombia (Vancouver, Canada)
- David Wilson, Microsoft Research (USA)

Authors and Articles:

This is the list of of the articles & posters presented during the conference. For some of the invited lectures, we refer to the webpage of the authors or to material already published elsewhere.

Omer Angel:
Random Infinite Permutations and the Cyclic Time Random Walk . . . 9

Nathanaël Berestycki and Richard Durrett:
A phase transition in the random transposition random walk 17

Yao-ban Chan and Anthony J. Guttmann:
Some results for directed lattice walkers in a strip 27

Dayue Chen and Yuval Peres:
The Speed of Simple Random Walk and Anchored Expansion in Percolation Clusters: an Overview 39

Endre Csaki and Yueyun Hu:
Lengths and heights of random walk excursions 45

Ho-Kwok Dai and Hung-Chi Su:
Approximation and Analytical Studies of Inter-clustering Performances of Space-Filling Curves 53

Moez Draief, Jean Mairesse, and Neil O'Connell:
Joint Burke's Theorem and RSK Representation for a Queue and a Store 69

Michael Drmota:
Discrete random walks on one-sided periodic graphs 83

Richard Durrett:
Rigorous result for the CHKNS random graph model 95

Luiz Renato G. Fontes, Marina Vachkovskaia, and Anatoli Yambartsev:
Entropic repulsion on a rarefied wall 105

David Gamarnik:
Linear Phase Transition in Random Linear Constraint Satisfaction Problems 113

Ira Gessel:
Combinatorial methods in lattice path enumeration . . . . . `http://www.cs.brandeis.edu/~ira/` . . . . . .

Michal L. Green, Alan Krinik, Carrie Mortensen, Gerardo Rubino, and Randall Swift:
Transient probability functions- a sample path approach 127

Mark Jerrum:
Decomposition techniques for rapid mixing . . . . . `http://www.dcs.ed.ac.uk/home/mrj/pubs.html` . . . . . `http://www.newton.cam.ac.uk/preprints/NI03006.pdf`

Anders Karlsson:
Some remarks on harmonic functions on homogeneous infinite graphs . 137

Oleksiy Khorunzhy:
Rooted Trees and Moments of Large Random Matrices 145

Guy Louchard:
The number of distinct part sizes of some multiplicity in compositions of an integer. An asymptotic analysis 155

Fabio Machado:
Percolation on a non-homogeneous Poisson blob process 171

Massimiliano Mattera:
Annihilating random walks and perfect matchings of planar graphs . . . 173

Philippe Marchal:
Constructing a sequence of random walks strongly converging to Brownian motion 181

James B. Martin:
Reconstruction Thresholds on Regular Trees 191

Mikhail Menshikov, Dimitri Petritis, and Serguei Popov:
Bindweeds or random walks in random environments on multiplexed trees and their asympotics 205

Donatella Merlini:
Generating functions for the area below some lattice paths 217

Michel Nguyên Thê:
Area of Brownian Motion with Generatingfunctionology 229

Pierre Nicodème:
q-gram analysis and urn models 243

Saibal Mitra and Bernard Nienhuis:
Osculating Random Walks on Cylinders 259

Alois Panholzer:
Non-crossing trees revisited: cutting down and spanning subtrees 265

Yuval Peres:
Evolving sets, mixing and heat kernel bounds . . . . . `http://front.math.ucdavis.edu/math.PR/0305349` . .

Serguei Popov:
Frogs and some other interacting random walks models 277

Klaus Simon and Beat Trachsler:
A Random Walk Approach for Light Scattering in Material 289

Gordon Slade:
Scaling Limits and Super-Brownian Motion . . . . . `http://www.ams.org/notices/200209/fea-sladecolor.pdf`

Andras Telcs:
The volume and time comparison principle and transition probability estimates for random walks 301

Leonid Tolmatz:
Asymptotics of the distribution of the integral of the absolute value of the Brownian motion for large arguments 309

Valentin Topchii and Vladimir Vatutin:
Individuals at the origin in the critical catalytic branching random walk 325

Alessandro Vezzani, Davide Cassi, and Raffaella Burioni:
Average properties of combinatorial problems and thermodynamics of spin models on graph 333

Nisheeth Vishnoi:
Non Uniform Random Walks 345

David Wilson:
Conformal Radii of Loop Models . . . . . .
`http://dimacs.rutgers.edu/~dbwilson/` . . . . . .
