732 Caroline Street   Mercy College

Port Angeles, WA 98362   Dobbs Ferry, New York 10522

This addendum concerns the paper of the above title found in EJQTDE/1999/199913. Throughout that paper was the tacit assumption that the coefficient functions $h(t)$, $b(t)$, and $C(t)$ are all continuous on their respective domains. Every result, as well as the existence result stated at the end of the first section, depended on those functions being continuous. A search of the paper indicates that we failed to state this. We regret any inconvenience which this may have caused any reader.
