# Prestige 650R-31/33 Read Me First

# **Prestige Rear Panel Connections**

PORT	CONNECTION
DSL	Connect to a telephone jack using a telephone wire.
CONSOLE	Connect to a serial port (COM port) on your computer using the RS-232 end (the big end) of the console cable (optional part). Connect the other end to the Prestige CONSOLE port.
LAN 10/100M	Connect to a computer/external hub using a crossover or a straight-through Ethernet cable.
POWER	Connect to a power source using the power adapter for your region (see your User's Guide).

Register your Prestige online at www.zyxel.com for free product updates and information.

## **Prestige Factory Defaults**

IP Address	192.168.1.1	Default Password	1234
Subnet Mask	255.255.255.0	DHCP IP Pool (Router only)	192.168.1.33 – 192.168.1.64

## **Network Access Checklist**

You need an account with an Internet Service Provider (ISP). Your ISP or telephone company should give you most of the following information. You do not need to fill in every blank.

REQUIRED INFORMATION				
Virtual Path Identifier (VPI):				
Virtual Channel Identifier (VCI):				
Multiplexing (VC-based or LLC-based): □ VC □ LLC			□ LLC	
DNS Server IP Address (if given): Primary, Secondary				
Your device's WAN IP Address (if given):				
Encapsulation:				
□ RFC 1483				
☐ ENET ENCAP	Ethernet Encapsulation Gateway IP Address:			
□ PPPoA	User Name:	_	Password:	
□ PPPoE	(PPPoE) Service Name: _			
	User Name:	<u> </u>	Password:	

## **Preparing Your Network**

All computers must have a 10M or 100M Ethernet adapter card and TCP/IP installed.

TCP/IP should already be installed on computers using Windows NT/2000/XP, Macintosh OS 7 and later operating systems.

These procedures are for dynamic IP addresses.

#### Setting up Your Windows 95/98/Me Computer

#### **Installing TCP/IP Components**

- 1. Click Start, Settings, Control Panel and double-click the Network icon.
- 2. The **Network** window **Configuration** tab displays a list of installed components.

To install TCP/IP:

- a. In the **Network** window, click **Add**.
- b. Select **Protocol** and then click **Add**.
- c. Select **Microsoft** from the list of manufacturers.
- d. Select TCP/IP from the list of network protocols and then click OK.

## Configuring TCP/IP

- 1. In the **Network** window **Configuration** tab, select your network adapter's **TCP/IP** entry and click **Properties**.
- 2. Click the **IP** Address tab. Click **Obtain an IP** address automatically.
- 3. Click the **DNS Configuration** tab. Select **Disable DNS**.
- 4. Click the Gateway tab. Highlight any installed gateways and click Remove until there are none listed.

- 5. Click **OK** to save and close the **TCP/IP Properties** window.
- 6. Click **OK** to close the **Network** window.
- 7. Turn on your Prestige and restart your computer when prompted. Insert the Windows CD if prompted.

#### **Verifying TCP/IP Properties**

- Click Start and then Run. In the Run window, type "winipcfg" and then click OK to open the IP Configuration window.
- 2. Select your network adapter. You should see your computer's IP address, subnet mask and default gateway.

#### Setting up Your Windows NT/2000/XP Computer

#### **Configuring TCP/IP**

- Click Start, Settings, Network and Dial-up Connections and right-click Local Area Connection or the connection you want to configure and click Properties. For Windows XP, click start, Control Panel, Network and Internet Connections and then Network Connections. Right-click the network connection you want to configure and then click Properties.
- 2. Select Internet Protocol (TCP/IP) (under the General tab in Win XP) and click Properties.
- 3. The Internet Protocol TCP/IP Properties window opens. Click Obtain an IP address automatically.
- 4. Click Obtain DNS server automatically.
- 5. Click **Advanced**, **IP Settings** tab and remove any installed gateways, then click **OK**.
- 6. Click **OK** to save and close the **Internet Protocol (TCP/IP) Properties** window.
- 7. Click **OK** to close the **Local Area Connection Properties** window.
- 8. Turn on your Prestige and restart your computer (if prompted).

#### **Verifying TCP/IP Properties**

- 1. Click Start, Programs, Accessories and then Command Prompt.
- 2. In the **Command Prompt** window, type "ipconfig" and then press **ENTER**. The window displays information about your IP address, subnet mask and default gateway.

#### Setting up Your Macintosh Computer

#### Configuring TCP/IP Properties

- 1. Click the Apple menu, Control Panel and double-click TCP/IP to open the TCP/IP Control Panel.
- 2. Select Ethernet from the Connect via list.
- 3. Select **Using DHCP Server** from the **Configure** list.
- 4. Close the TCP/IP Control Panel.
- 5. Click **Save** if prompted, to save changes to your configuration.
- 6. Turn on your Prestige and restart your computer (if prompted).

#### **Verifying TCP/IP Properties**

Check your TCP/IP properties in the TCP/IP Control Panel.

## **Internet Access Configuration**

- 1. Web configurator
- 2. SMT (System Management Terminal). Access the SMT via:
  - Telnet

• Console port using terminal emulation software

## **Procedure For Web Configurator Configuration**

- 1. Launch your web browser and enter "192.168.1.1" (default) as the URL.
- 2. Type "admin" as the user name, "1234" (default) as the password and press ENTER.
- 3. You should now see the **SITE MAP** screen. Click the help icon (located in the upper right portion all screens) for online HTML help.

## **Procedure For SMT Configuration via Telnet**

- 1. Launch a Telnet program. In Windows, click **Start** and then **Run**. Type "Telnet" followed by a space and the IP address of the Prestige, (192.168.1.1 is the default) and click **OK** to display the password screen.
- 2. Enter the password (1234 is the default), to access the SMT main menu. As you type a password, the screen displays an asterisk "\*" for each character you type.

### **Procedure For SMT Configuration via Console Port**

- 1. Configure a terminal emulation communications program as follows: VT100 terminal emulation, no parity, 8 data bits, 1 stop bit, data flow set to none, 9600 bps port speed.
- 2. Press ENTER to display the SMT password screen. The default password is "1234".

Use the ISP information you gathered to configure SMT menu 4 and access the Internet. Refer to your *User's Guide* for details.

#### **Troubleshooting**

PROBLEM	CORRECTIVE ACTION		
The PWR and/or SYS LED are off.	Make sure the Prestige is connected to the correct power adapter, the power adapter is plugged into an adequate power supply and the Prestige power switch is turned on.		
	Turn the Prestige off and on. If the error persists, you may have a hardware problem. In this case, you should contact your vendor.		
The LAN LED won't turn on.	Check the cable connection to the Prestige LAN port.		
	Make sure you are using a crossover Ethernet cable if you are connecting the Prestige directly to one computer and a straight-through cable if you are connecting your Prestige to LAN computers via a hub.		
	Make sure your computer NIC (Network Interface Card) is working properly.		
The DSL LED is off.	Check the connection between the Prestige DSL port and the wall jack.		
I cannot access the Prestige	Check to see if the Prestige is connected to your computer's serial port.		
via the console port.	Check to see if the communications program is configured correctly. Refer to the defaults in the <i>Procedure For SMT Configuration via Console Port</i> section.		
I cannot access the SMT menu.	The default SMT password is "1234". If you have changed the password and have now forgotten it, you will need to upload the default configuration file (see <i>User's Guide</i> ).		
I cannot access the web configurator.	Check that your computer IP address and the Prestige IP address are on the same subnet.		

# <u>Troubleshooting</u>

PROBLEM	CORRECTIVE ACTION
	If you changed the Prestige default LAN IP address then enter the new one as the URL.
	Remove any filters you have applied in menu 3.1 (LAN) or in menu 11.5 (WAN) to block web service.
	Check if you have an SMT console session running.
I cannot ping any computer on the LAN. (Router only)	If all of the 10/100M LAN LEDs are off, check the cables between the Prestige and your computer or hub.
	Verify that the IP address and the subnet mask of the Prestige and the computers are on the same subnet.
	Check the TCP/IP configuration on your computer. Make sure that the IP address and the subnet mask of the Prestige and the computers are on the same subnet.
I cannot get a WAN IP	The WAN IP is provided after the ISP verifies the MAC address, host name or user ID.
address from the ISP.	Find out the verification method used by your ISP and configure the corresponding fields.
I cannot access the Prestige web configurator.	Check if you have applied a filter in menu 3.1 (LAN) or in menu 11.5 (WAN) to block web service.
	Check if you have an SMT console session running.
	Check the TCP/IP configuration on your computer. Make sure that the IP address and the subnet mask of the Prestige and the computers are on the same subnet.
	The default password is "1234". If you have changed the password and have now forgotten it, you will need to upload the default configuration file (see <i>User's Guide</i> ).
I cannot access the Internet.	Make sure the Prestige is turned on and connected to the network.
	If the Prestige's DSL LED is off, check the cable between the Prestige and the telephone wall jack.
	Make sure you entered your user name correctly. A username may be case-sensitive.
