Abstract. The purpose of this note is to describe a framework which unifies radial, chordal and dipolar SLE. When the definition of SLE$(\kappa;\rho)$ is extended to the setting where the force points can be in the interior of the domain, radial SLE(κ) becomes chordal SLE$(\kappa;\rho)$, with $\rho = \kappa - 6$, and vice versa. We also write down the martingales describing the Radon–Nykodim derivative of SLE$(\kappa;\rho_1,\ldots,\rho_n)$ with respect to SLE(κ).
