

NAME

curl_slist_append - add a string to an slist

SYNOPSIS

```
#include <curl/curl.h>
```

```
struct curl_slist *curl_slist_append(struct curl_slist *list, const char * string);
```

DESCRIPTION

curl_slist_append() appends a specified string to a linked list of strings. The existing *list* should be passed as the first argument while the new list is returned from this function. The specified *string* has been appended when this function returns.

RETURN VALUE

A null pointer is returned if anything went wrong, otherwise the new list pointer is returned.

SEE ALSO

curl_slist_free_all(3),

BUGS

Surely there are some, you tell me!
