

**NAME**

curl\_multi\_cleanup - close down a multi session

**SYNOPSIS**

```
#include <curl/curl.h>
```

```
CURLMcode curl_multi_cleanup( CURLM *multi_handle );
```

**DESCRIPTION**

Cleans up and removes a whole multi stack. It does not free or touch any individual easy handles in any way - they still need to be closed individually, using the usual curl\_easy\_cleanup() way.

**RETURN VALUE**

CURLMcode type, general libcurl multi interface error code.
