

Package ‘elaborator’

September 18, 2024

Title A 'shiny' Application for Exploring Laboratory Data

Version 1.3.4

Description A novel concept for generating knowledge and gaining insights into laboratory data. You will be able to efficiently and easily explore your laboratory data from different perspectives. Janitza, S., Majumder, M., Mendolia, F., Jeske, S., & Kulmann, H. (2021) <[doi:10.1007/s43441-021-00318-4](https://doi.org/10.1007/s43441-021-00318-4)>.

Depends R (>= 3.5.0), seriation

License GPL-3

URL <https://github.com/openpharma/elaborator>

Encoding UTF-8

Imports shiny, dplyr, purrr, DT, here, tidyselect, rlang, tidyr, forcats, RColorBrewer, bsplus, dendextend, haven, reshape2, shape, shinyWidgets, shinydashboard

LazyData true

RoxygenNote 7.2.3

NeedsCompilation no

Contents

launch_elaborator	2
Index	4

launch_elaborator *Launches the elaborator application*

Description

Starts the elaborator application in the client's browser.

Usage

```
launch_elaborator(
  elaborator_data = NULL,
  host = "0.0.0.0",
  port = NULL,
  browser = NULL
)
```

Arguments

elaborator_data	data derived for the elaborator app
host	host link (defaults to the local machine "127.0.0.1")
port	port number (randomly chosen unless specified as a certain number)
browser	path to browser exe (defaults to standard browser)

Value

A shiny app

Examples

```
if(interactive()){
## Launch application on localhost (127.0.0.1)
## -----
## By default launch_elaborator starts the application on localhost
## and a randomly selected port (e.g. 9876), in which case you can connect
## to the running application by navigating your browser to
## http://localhost:9876.
launch_elaborator()

## Launch application on a different host
## -----
## You can also run the application on a different host
## by specifying a hostname and port. Just make sure to
## use an open port on your machine. Here "open" means
## that the port should not be used by another service
## and the port is opened by your firewall.
launch_elaborator(host="your-hostname", port = 8888, browser = NULL)
```

```
## Make the application available to your coworkers
## -----
## within your local area network even without a
## dedicated Shiny server. The value set through the
## host argument says to accept any connection (not just from localhost).
## Then take note of your local IP (if you are under linux,
## you can see it through ifconfig). Say your IP is 192.168.1.70.
## Your colleagues can use your app by inserting in the address
## bar of their browser 192.168.1.70:8888, i.e. your IP followed
## by : and the port number you selected.
launch_elaborator(host="0.0.0.0", port=8888)

## Launch application on a different browser
## -----
## To run the shiny app on a different browser than your standard browser
## use the "browser" argument to set the path to the respective .exe file.
launch_elaborator(browser = "C:/Program Files/Mozilla Firefox/firefox.exe")
}
```
